Network Comparison: Overlap Statistics

Node Overlap Analysis

```
Original Nodes:           1,035
Consensus Nodes:            618
_____

Overlapping Nodes:          315  (Jaccard: 0.2354)

Original Only:              720  (69.6%)
Consensus Only:             303  (49.0%)

Key Insight:
51% of consensus nodes are in original,
but only 30% of original nodes in consensus.
Consensus has different disease focus.
```

Edge Overlap Analysis

```
Original Edges:           2,199
Consensus Edges:          1,722
_____

Overlapping Edges:          115  (Jaccard: 0.0302)

Original Only:            2,084  (94.8%)
Consensus Only:          1,607  (93.3%)

Key Insight:
Low edge overlap (3%) despite 30% node overlap.
Networks connect same diseases very differently.
Both represent valid but distinct disease relationships.
```
